David Wang

Australian Citizen

Summary

Software Engineering graduate (University of Western Australia) and full-stack developer building a business-critical aviation application used in time-sensitive operations. Delivers features for flight manifests, freight handling, passenger check-in and staff certification using C#, ASP.NET Razor Pages, LINQ, SQL Server and HTMX, taking work from requirements through database changes, testing and release alongside a senior developer and operational users. Uses AI-assisted tools with careful review and testing of every change. Seeking a graduate software developer role; Australian citizen, open to relocation.

Technical Skills

Languages:	C#, SQL, JavaScript
Frameworks:	ASP.NET Razor Pages, HTMX, Vue.js, HTML, CSS, Tailwind CSS
Data:	SQL Server, LINQ, Linq2DB, REST APIs
Tools:	Git, AI-assisted development, integration testing, database migrations
Cloud:	AWS Lightsail
Concepts:	service-layer architecture, requirements analysis

EMPLOYMENT HISTORY

Full-Stack Developer | Private Charter Airline | December 2025–Present

Stack: C#, .NET 10, ASP.NET Core Razor Pages, HTMX, LINQ/Linq2DB, Azure SQL Database, Git

- Built a Dangerous Goods certification system that tracks pilot certification expiry and blocks lapsed pilots from passenger flights, replacing manual checks and strengthening regulatory compliance (**C#, Azure SQL Database**).
- Delivered flight delay tracking, capturing delay reasons, off-blocks times and actual arrival times to feed a report showing delay causes for each pilot, with database migrations rolled out without disruption to live operations (**C#, Azure SQL Database, Simple.Migrations**).
- Built a "copy previous manifest" feature that carries passengers and freight from one leg to the next with duplicate-record checks, removing manual re-entry for multi-leg flights of 60+ passengers (**C#, Azure SQL Database, HTMX**).
- Work directly with owner and a senior developer to gather requirements, clarify edge cases and refine features based on user feedback.
- Used AI-assisted development tools to explore implementation approaches, debug issues and speed up delivery, critically reviewing and testing all generated code before integration into the production codebase.

PROJECT EXPERIENCE

Student Software Developer (Capstone Project) | University of Western Australia | July 2023 – November 2023

Stack: Python, Flask, HTML, CSS, JavaScript, AWS Lightsail

- Delivered a web-based plagiarism-detection application for a UWA Associate Professor of Psychology with a team of six students, completing the minimum viable product about six weeks ahead of schedule and using the extra time to add client-requested features.
- Developed the Word document metadata analysis, extracting author, creation and modification dates, revision history to flag suspicious attributes, e.g. low total editing time.

- Deployed and maintained the application on AWS Lightsail.
- Gathered requirements from the client and adapted the solution as project scope evolved.

Front-end Web Developer | Coders for Causes (University Club) | December 2022 – March 2023
Stack: Vue.js, Tailwind CSS, Node.js, Git, Figma

- Built responsive web pages from Figma designs for nonprofit clients, including the Western Australian Debating League, Elucidate and Pets of Older Persons, as part of a 30+ developer student team.
- Selected for a paid continuation role with the Western Australian Debating League, delivering further development and working directly with the client.
- Used Git branching and pull requests to coordinate changes across the team and deliver within a 12-week timeframe.
- Incorporated evolving client feedback into the delivered solutions.

EDUCATION

Bachelor of Science (Software Engineering)
University of Western Australia | February 2021 – November 2023
UWA Engineering Scholarship, awarded for academic merit for the duration of the degree

Master of Professional Engineering (Software Engineering), partially completed
University of Western Australia | February 2024 – November 2024
Completed one year of postgraduate study including Mobile Robots and Artificial Intelligence & Adaptive Systems before leaving the program to pursue professional software development opportunities.

EXTRACURRICULAR ACTIVITIES

Running

Completed the HBF Run for a Reason half-marathon, demonstrating perseverance and long-term commitment.

REFEREES

Greg Bell
Senior Software Engineer, Downer Group
